

ABSTRACT**A BRAZIER GRILL AND A BRAZIER**

The present invention relates to a brazier grill and a brazier with such grill used for cooking foodstuffs. Said brazier grill (2) is single layered and comprises grooved grill bars (4, 4', 4''), which are placed in parallel to each other and remove molten fats and cooking liquids emanating from foodstuffs placed thereon during grilling. Two such grooved grill bars (4, 4', 4'') are placed side by side in parallel with a b2 distance to form a grill grill opening (6) corresponding to 1 mm to 10 mm. This grill opening (6) is formed in a direction perpendicular (T) to the grill so as to allow heat rays emitted from an underneath heat source to pass directly (without encountering any obstructions) through such grill openings to reach a foodstuff on said grooved grill bars during grilling.
